

Associate Degree Program

# NETWORK SYSTEMS ADMINISTRATION

## ABOUT THIS DEGREE PROGRAM

Computer and communication networks enable everything from long-distance file sharing to instant messaging. Building and maintaining these networks is the responsibility of network systems administrators. A degree in Network Systems Administration from DeVry University can prepare you with the skills need to deal with network and communication technologies while gaining valuable management and communication skills.

In our degree program you have the opportunity to prepare for certifications like the Cisco Certified Network Associate (CCNA). You can also work first-hand with the same technologies that you may experience out in the field.

Through our TechPath approach, we've put technology at the core of our programs in business, tech and health – including this program. Every TechPath class you take revolves around a unique learning rubric developed at DeVry. We call it People-Process-Data-Devices or P2D2. You'll gain real skills in collaboration, be able to adapt to new structures, and be comfortable working with data and a wide spectrum of tech-forward tools. P2D2 is a key component of what makes TechPath a smart, new way of getting the knowledge you need to be ready to hit the ground running in the way successful companies work today.

## GENERAL EDUCATION COURSEWORK

### Communication Skills

- ENGL112<sup>1</sup>** Composition
- ENGL135** Advanced Composition
- SPCH275** Public Speaking

### Humanities

- ETHC232** Ethical and Legal Issues in the Professions

### Social Sciences

- SOCS185<sup>2</sup>** Culture and Society

### Mathematics<sup>3</sup>

- MATH103** Beginning Algebra
- MATH114** Algebra for College Students

### Personal and Professional Development

- CARD205** Career Development
- COLL148** Critical Thinking and Problem-Solving

### Business and Computing Applications

- CEIS100** Introduction to Engineering Technology and Information Sciences
- CIS206** Architecture and Operating Systems with Lab
- COMP100** Computer Applications for Business with Lab
- COMP230** Introduction to Scripting and Database with Lab
- SEC280** Principles of Information Systems Security

### Network Operating Systems and Technologies

- NETW230** Network Operating Systems – Windows, with Lab
- NETW240** Network Operating Systems – UNIX, with Lab
- NETW250** Voice/VoIP Administration with Lab

<sup>1</sup>Students enrolled at a New Jersey location take ENGL108 in lieu of this course.

<sup>2</sup>Students enrolled at a Nevada location must take POLI332 in lieu of this requirement.

<sup>3</sup>Students enrolled at a New Jersey location must take one of the following additional natural science courses as part of this requirement for a total of 11-12 credit hours in this course area: BIOS105; BIOS135; PHYS204; SCI200.

## CORE-DEGREE COURSEWORK

### ALL OF:

- NETW202** Introduction to Networking with Lab
- NETW204** Introduction to Routing with Lab
- NETW206** Introduction to Switching with Lab
- NETW208** Introduction to WAN Technologies with Lab

### OR

### ALL OF:

- NETW203** Cisco Networking Academy – Introduction to Networking with Lab
- NETW205** Cisco Networking Academy – Introduction to Routing with Lab
- NETW207** Cisco Networking Academy – Introduction to Switching with Lab
- NETW209** Cisco Networking Academy – Introduction to WAN Technologies with Lab

## DID YOU KNOW?

Cisco Networking Academy courses at DeVry University teach networking and IT skills that can prepare you for industry-recognized certifications.

Courses in blue are part of the DeVry Tech Path

## CAREERS IN NETWORK SYSTEMS ADMINISTRATION

Our reliance on data and our need to access that data quickly and securely, across many different platforms and devices has increased rapidly in the last decade.

DeVry University's Network Systems Administration degree program, can teach you how to build and maintain those data networks, including how to activate accounts and institute security measures, install and configure routers and switches, and monitor the performance of both local and wide area networks. You can learn how to troubleshoot common problems and learn to find quick solutions.

With the knowledge you gain, you can be prepared to set up servers and workstations using operating systems, enable security and access measures, and set up virtual private networks for any organization.

Graduates of DeVry University's Network Systems Administration associate degree program may consider careers including, but not limited to, the following:

- Computer/Digital Forensic Investigator<sup>1</sup>
- Computer Network Support Specialist

<sup>1</sup> Applicants for jobs in the justice administration field may be subject to pre-employment screenings such as, but not limited to, criminal background checks, drug and/or alcohol testing, physical and/or psychological examinations and credit checks. Unsatisfactory screening results may disqualify an applicant for a position in the justice administration field. Additional government-required training programs may be necessary to obtain employment in this field. Employment in this occupation may require years of relevant experience.

Employment in some occupations may require years of relevant experience.

In New York, DeVry University operates as DeVry College of New York.

DeVry University is accredited by The Higher Learning Commission (HLC), [www.hlcommission.org](http://www.hlcommission.org). DeVry is certified to operate by the State Council of Higher Education for Virginia, Arlington Campus – 2450 Crystal Dr., Arlington, VA 22202. DeVry University is authorized for operation by the THEC, [www.tn.gov/thecc](http://www.tn.gov/thecc) Nashville Campus - 3343 Perimeter Hill Dr., Nashville, TN 37211. To report unresolved complaints to the Illinois Board of Higher Education, visit their webpage at <http://complaints.ibhe.org/> or by mail to the Illinois Board of Higher Education, 1 N. Old State Capitol Plaza, Suite 333, Springfield, IL 62701-1377. Program availability varies by location. ©2016 DeVry Educational Development Corp. All rights reserved. Version 08/14/17

## KNOWLEDGE AND SKILLS

**NETWORKING** — Gain working knowledge of the underlying technology of local area networks (LANs), wide area networks (WANs), and the Internet, including networking media, the Open Systems Interconnection (OSI) model, transmission control protocol/Internet protocol (TCP/IP), routing and switching, and small network configuration and troubleshooting.

**ROUTING** — Understand router configuration, maintenance and troubleshooting; explore Internet protocol (IP) addressing techniques, routing protocols; IPv4 and IPv6, and access control lists (ACLs), and network address translation (NAT).

**SWITCHING** — Understand switch configuration, maintenance and troubleshooting; explore Ethernet frame switching techniques, switchport security, virtual area networks (VLANs), and VLAN Trunking Protocol (VTP).

**NETWORK OPERATING SYSTEMS** — Study the basic operation and management of local and wide area networks using the Microsoft or UNIX network operating systems (NOSS). Learn the installation of server and workstation software, physical network configuration, network security, policy domain controllers, and performance monitoring and troubleshooting techniques.

**VOICE/VOIP ADMINISTRATION** — Explore technologies and systems that serve voice traffic, including enterprise switches (e.g., private branch exchanges and Centrex), networked telephony solutions, voice over Internet protocol (VoIP), call centers, voice processing and wireless systems.

**SYSTEMS ANALYSIS** — Determine how a system should work and how changes in conditions, operations and the environment will affect outcomes.

**CRITICAL THINKING** — Use logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions or approaches to problems.

**INFORMATION ORDERING** — Arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures or mathematical operations).

**INTERACTING WITH COMPUTERS** — Use computers and computer systems to program hardware, write software, set up functions, enter data or process information.
